Product Description

The Ultimate Dumping Work Trailer!

The new DR® Versa-Trailer is unlike any utility trailer you've seen. There are hundreds of trailers out there that haul (that's the easy part!). The hard work is all in the lifting and dumping. And the 1-Ton Versa-Trailer uses a Boom-Lift to take the struggle out of lifting and dumping. Use the DR® Versa-Trailer with your ATV, UTV, or just about any other vehicle you're willing to use off-road. The 1-Ton Model:

Plus, you can take the DR® Versa-Trailer places you would never go with an ordinary trailer! It's the most versatile trailer ever for use with ATVs or other off-road vehicles. Tandem wheels "walk" over almost any obstacle, and side stabilizers keep the trailer stable when loading or unloading with the boom lift. End panels can easily be removed and the bed converted to a stake bed for transporting longer loads such as logs or lumber.

Product Summary

- LIFTS up to 440 lbs.
- DUMPS up to 650 lbs.
- HAULS up to 2000 lbs.

Features

Swinging Boom Lift

The boom will lift objects weighing up to 440 lbs. from either side of the trailer. It's like having two strong men helping you lift heavy weights, and it's a lot safer. Use it for rocks, logs, pallets, balled trees and more. The angle of the boom can easily be adjusted, without tools, allowing you to lift and load objects without constantly repositioning the trailer.

Side Stabilizers

Can be lowered and secured, without tools, to stabilize the trailer when loading or unloading. Keep your trailer steady when using the boom lift from either side.

Stake Bed Configuration

By removing two pins, one person can slide the steel dump bed off the trailer frame. Then, four extenders (included) can be added into frame pockets, and the conversion is complete. It takes less than five minutes! The stake bed lets you handle long loads like log lengths, lumber, dock sections and more. The extenders are chained to the frame to prevent loss when they're not in use.

Winch-assisted Dumping

Many so-called "dump" trailers have such a shallow tilt to their dump action that you have to shovel them out or unload them by hand. The Versa-Trailer has a steep, 35 degree dump angle that allows you to empty your full load without any manual labor. Like the lifting, the dumping action is winch-assisted, with the cable attaching to a hitchpoint on the trailer's floor.

Tandem Wheels

The Versa-Trailer's tandem wheels pivot on the axle so that, working together, they create a kind of independent suspension. This allows the trailer to adapt to all sorts of rugged terrain and "walk" right over all kinds of obstacles.

Removable End Panels

The end panels come off in seconds, without tools, for carrying log loads or for dumping.

Pivoting Jack Stand

Raises or lowers the tongue, for hitching to your towing vehicle without straining your back. The hitch itself also pivots, allowing your towing vehicle and the trailer to ride independently over rough terrain without putting torque on the tongue or hitch.

Pivoting Hitch

The pivoting hitch allows your towing vehicle and the trailer to ride independently over rough terrain without putting torque on the tongue or hitch.

Steel Guards

Tire valves are protected from rocks, roots and stumps, so you can take the trailer into woodlots, on trails, or through meadows without worry.
