Product Description

DR ATV Cultipacker

When planting a large area for game food plots or gardens with cover crops, it is essential for good germination that you press the seeds into the soil so that they are partially buried and in contact with the dirt. Sprouted seeds lying on top of the seedbed will quickly dry out and die. But with the Cultipacker you can quickly and easily press the seeds you've broadcast into the soil, eliminating air pockets, and increasing germination rates dramatically.

Product Summary
