

Dr Power 2-Stage Snow Blower

Our PRO 28B DR Snow Blower steps up from our base model by increasing the clearing width (to 28" wide) and powering it with a bigger engine!

Product Description

A Winter Workhorse That's Ready to Run!

Our DR PRO-28B Snow Blower is a feature-rich machine that gives you the power to blast through deep snow. Plug-in electric starting puts an end to hard starts—just run an extension cord, plug in, and you get sure-fire starts without the expense and battery maintenance that comes with a normal electric-starting engine. Plus, we've added commercial-level comforts to help you enjoy the work: heated hand grips, EZ-Turn™ steering for hassle-free 180° turns, an LED headlamp to light your way in the dark, and an integrated control panel that puts all operations within easy reach.

With a 28" clearing width and an 8-speed transmission (6 forward speeds and 2 reverse), the PRO-28B is up to any job. Our OHV engine (8.5 HP, 302cc) is designed for cold weather conditions and will keep working as long as you do. Big 15" tires provide reliable traction. This snow blower is built to last!

Product Summary

- 28" wide, 2-stage blower
- 8.5 HP (302cc) DR OHV engine
- 6 forward speeds, 2 reverse
- EZ-Turn™ steering technology
- 15"x 6.5" snow tires
- Throwing distance: up to 45'
- Friction disc transmission
- See Features and Specs for more product details

Warranty Coverage

- Machine: 2 year residential; 90 days commercial
- Engine: 2 year residential; 90 days commercial

Features

Plug-in Electric Start Using a standard 3-prong extension cord, plug in, push a button, and you're up and running! There is no battery that requires charging or maintenance. Recoil backup, with compression-release, makes for easy pull starts when you're away from a power source.

DR OHV Engine This cold-weather engine (8.5HP, 302cc) is designed especially for extreme conditions and has the muscle to power through deep or wet snow.

EZ-Turn™ Steering When you initiate a turn, the two axle shafts are free to drive independently and go wherever you guide the machine. The result is the ability to make tight, 180° turns, without wrestling the machine.

Integrated Control Panel Controls for all functions are right at your fingertips: gear shift, auger and drive hand levers (once transmission is engaged, the auger control locks in so you can operate with right hand only), chute rotation/deflection, heated handwarmers, and LED headlight.

Snow Tires 15" x 6.5" pneumatic tires provide positive traction, even in icy conditions.

Plug-in Electric Start Using a standard 3-prong extension cord, plug in, push a button, and you're up and running! There is no battery that requires charging or maintenance. Recoil backup, with compression-release, makes for easy pull starts when you're away from a power source.

Friction Disc Transmission Simple but effective drive system transfers power to the drive wheels via a rubberized friction disc. Easy to maintain and easily accessible.

2-Stage for Efficient Snow Removal The serrated auger breaks up ice and compacted snow. Our Heavy-duty steel impeller, backed by a LIFETIME warranty (12" in diameter and constructed of 10-gauge steel) draws the loosened material up and out the chute. This 2-stage system creates a high-speed wind channel that throws snow up to 45 feet away!

Snow Stick (included) Onboard snow stick for quick and safe clearing of ice or other clogs.
